Part A - Features

Executive Summary

AdSpot is a rewarded-attention advertising platform built for Nigeria and broader Africa. Instead of interruptive banners that users skip, AdSpot pays reviewers to watch brand creatives, answer comprehension questions, and earn points redeemable for airtime, data, and gift vouchers. Brands receive verified attention metrics, first-party survey responses, and fraud-scored engagement - not vanity impressions.

The platform unifies four audiences in one deployable stack: reviewers (/earn), brands (/brands), platform operators (/brands/admin), and network partners (/partners). Version 1.1 adds the Partner Management Portal with a one-click Integrate with AdSpot button, default-inactive integration state, and completion webhooks for publisher rev-share.

A.1 Earn Engine (Reviewer Portal)

Capability	Description	Route / component
Landing & registration	Self-serve reviewer onboarding	/, /earn/register
Dashboard & ad feed	Points balance, available campaigns	/earn/dashboard
Review sessions	Timed watch + question gating	/earn/review/:id - ReviewSession, VideoPlayer
Leaderboard	Ranked competition with eligibility rules	/earn/leaderboard
Referrals	Viral growth via referral codes	server/routes/referrals.ts
Rewards & gifts	Airtime, data, voucher redemption	server/routes/gifts.ts, ReviewSession rewards
Profile	Reviewer settings and KYC-lite profile	/earn/profile

Session lifecycle: Reviewers must meet minWatchSeconds on video/image creatives, answer up to 10 brand questions (MCQ, rating, emoji, yes/no, open text), and pass server-side fraud checks before points credit.

A.2 Brands Portal

Capability	Description	Route / component
Campaign CRUD	Create, fund, publish, pause ads	/brands/ads, /brands/ads/new
Question builder	Attach comprehension questions to creatives	CreateAd
Creative upload	Object storage for video/image assets	@workspace/object-storage-web
Analytics dashboard	Per-ad stats, survey positivity, exports	/brands/dashboard, BrandAnalytics

AI summaries	OpenAI-powered campaign insights	AISummaryPanel
Package bundles	Prepaid impression bundles	AllocateBundle, server/routes/packages.ts
Brand settings	Wallet, team, notification prefs	/brands/settings

A.3 Admin & Operator Console

Capability	Description	Route
User management	Reviewer/brand account moderation	/brands/admin/users
Ad moderation	Campaign approval and fraud queues	/brands/admin/ads
Events log	Platform activity audit trail	/brands/admin/events
Financial controls	Revenue, payouts, platform settings	/brands/admin/financials
Fraud enforcement	Manual review of flagged sessions	server/routes/fraud.ts

Roles: brand, admin, super_admin. Super-admin bypass for platform owner (oadeagbo@gmail.com).

A.4 Gamification

1. **Points ledger** - Server-authoritative balance; no client-side point manipulation.
2. **Leaderboard** - Weekly/monthly ranks with minimum-session eligibility.
3. **Proverb bonus challenges** - Cultural engagement hooks during review sessions.
4. **Referral bonuses** - Reviewer-to-reviewer growth with brand-funded bounties.
5. **Streak-style UX** - Dashboard cues encourage daily return without dark patterns.

A.5 Partner Portal & Integrate Button

The Partner Management Portal (partner-portal/) serves newspapers, digital publishers, and media outlets joining the AdSpot Network Partner Program.

Feature	Behaviour
Default state	adspot_linked = false - UI shows Not connected (muted/grey)
Integrate button	One-click activation via POST /api/partners/:id/integration/activate
After activation	API key, embed script tag, webhook URL exposed; UI shows AdSpot Connected
Hard audit rule	UI never shows active without API adspotLinked: true and apiKey
Mount options	Standalone (pnpm dev:partners), embedded at /partners, or programmatic mountPartnerPortal()
Inventory UI	Partner profile, ad slots, revenue view (pilot)

Activation flow:

```
User clicks "Integrate with AdSpot"
-> Confirm modal
-> POST /api/partners/:id/integration/activate
-> Server sets adspot_linked=true, generates api_key + embed_config
-> UI shows "AdSpot Connected" + copyable embed tag
```

Embed tag format: <script src="../../../embed/partner.js" data-partner-id="..." data-api-key="...">

Part B - Technical Implementation

B.1 Architecture

Split deploy option: SPA on S3/CloudFront + API on App Runner/ECS with CORS_ORIGINS allowlist.

B.2 Monorepo Structure

Path	Package	Purpose
app/	@workspace/adspot-unified	Unified React SPA (landing + earn + brands + partners mount)
partner-portal/	@workspace/partner-portal	Standalone partner management module
server/	@workspace/api-server	Express API server
lib/db/	@workspace/db	Drizzle schema, migrations, seeds
lib/api-zod/	@workspace/api-zod	Generated Zod API contracts
lib/api-client/	@workspace/api-client	Typed frontend API client
lib/object-storage-web/	@workspace/object-storage-web	S3-compatible upload helpers
lib/integrations-openai-ai-server/	OpenAI integration	Lazy-loaded AI summaries
scripts/	-	Hostile audit, packaging, PDF render
docs/	-	Integration specs, partner program, audit reports

Build order: api-server -> adspot-unified -> partner-portal

Start command: pnpm start -> PORT=3001 STATIC_DIR=./app/dist node server/dist/index.mjs

B.3 API Routes

Router	Prefix	Key endpoints
health	/api/healthz	DB connectivity probe
auth	/api/auth	register, login, me, logout
ads	/api/ads	Campaign CRUD, publish
reviews	/api/reviews	Session start, watch progress, submit answers
points	/api/points	Ledger, balance
leaderboard	/api/leaderboard	Rankings
brands	/api/brands	Brand profile, wallet
brand-analytics	/api/brand-analytics	Dashboard stats, exports
admin	/api/admin	Users, ads, events, financials
packages	/api/packages	Prepaid bundles
rewards	/api/rewards	Redemption flows
gifts	/api/gifts	Airtime/voucher catalog
referrals	/api/referrals	Referral codes
fraud	/api/fraud	Fraud signals, admin review
storage	/api/storage	Presigned upload URLs
notifications	/api/notifications	In-app notifications
public	/api/public	Public ad feed (no auth)
partners	/api/partners	Partner CRUD, integration activate/deactivate

Security: Helmet headers, rate limiting (300 req/min API, 20 auth attempts/15 min), CORS same-origin default, JWT session tokens, role-separated login portals.

B.4 Partner Integration API

Base path: /api/partners (Express router in server/src/routes/partners.ts)

Method	Path	Response
POST	/partners	{ partner } - creates partner + inactive integration row
GET	/partners/:id	{ partner }
GET	/partners/:id/integration	{ status, adspotLinked, apiKey?, embedScript?, webhookUrl? }
POST	/partners/:id/integration/activate	Active integration + message
POST	/partners/:id/integration/deactivate	Inactive integration + message
POST	/partners/:id/webhooks/completions	Brand-verified completion events

Client modules (partner-portal/src/lib/): partnerApi.ts, adspotBridge.ts, integrationState.ts, IntegrateAdSpotButton.tsx

Mock mode: AUDIT_PARTNER MOCK=1 uses in-memory store for Tier 2 hostile audit without Postgres.

B.5 Hostile Audit - 3-Tier Quality Gate

Canonical script: scripts/hostile-audit.mjs
Report: docs/HOSTILE_AUDIT_REPORT.md (auto-generated each run)

Tier	Name	Checks
Tier 1	BUILD GATE	pnpm install, typecheck, test, build (API + SPA + partner-portal), partner migration exists, docs present
Tier 2	MOCK	Local unified server boot, SPA routes 200 (/earn/, /brands/, /partners), partner API inactive->active flow, Integrate button DOM verification
Tier 3	LIVE	/api/healthz db connected, auth smoke with seeded accounts, live partner activate

Verdict	Condition
FAIL	Any Tier 1 or Tier 2 failure
PARTIAL	Tier 1+2 pass; Tier 3 skipped or failed
PASS	All executed tiers pass

Hard rules: Never pass if routes 404. Never pass if UI shows active without API adspotLinked: true.

B.6 Database Schema

PostgreSQL via Drizzle ORM (lib/db/src/schema/).

Table group	Tables	Purpose
Users & auth	users, profiles	Accounts, roles, reviewer profiles
Brands	brands	Brand accounts, wallets
Campaigns	ads, questions	Creatives, comprehension questions
Sessions	reviews, points, events	Watch sessions, ledger, audit log
Gamification	leaderboard, referrals, rewards, redemptions, gifts	Competition, growth, payouts
Platform	packages, settings, fraud, notifications	Bundles, config, fraud queue
Partners	network_partners, partner_integrations	Publisher profiles, integration state (default adspot_linked = false)

Migration: lib/db/migrations_adspot_partners.sql

Seed commands:

```

npx pnpm@9 --filter @workspace/db run push
npx pnpm@9 --filter @workspace/db run seed
npx pnpm@9 --filter @workspace/db run seed:accounts
npx pnpm@9 --filter @workspace/db run seed:settings

```

Part C - Commercial Recommendations

C.1 Network Partner Program

AdSpot's Network Partner Program targets newspapers, digital publishers, and media outlets that want to monetise editorial inventory with verified brand-review campaigns - without building ad tech.

Stakeholder	Benefit
Publisher	Rev-share on verified completions; one-click integration; no upfront build cost
Brands	Reach engaged audiences on trusted media properties
Reviewers	Earn points on AdSpot for authentic feedback (existing earn portal)
AdSpot	Platform fee + network effects; publisher distribution at scale

Technical default: Every new partner starts with `adspot_linked = false`. No campaign routing, API keys, or embed tags until the partner explicitly clicks Integrate with AdSpot.

C.2 Revenue-Share Model

Party	Pilot share	Notes
Publisher	60%	Net of fraud-adjusted completions
Reviewer pool	30%	Points credited via existing earn rails
AdSpot platform	10%	Ops, fraud, payout infrastructure

Verification: Completion webhooks + minimum watch-time thresholds before payout. Monthly NGN statements. Settlement via Paystack/Flutterwave (existing AdSpot brand top-up rails).

Scale terms: Rev-share negotiable at 10+ publisher partners or NGN 50M+ annual GMV through network inventory.

C.3 Pilot Terms (90-Day Trial)

Term	Detail
Duration	90 days from integration activation
Minimum inventory	None - partner opts in slot-by-slot
Integration cost	Zero - embed tag + API key included
Fraud SLA	AdSpot handles bot detection; publisher reports anomalies within 48h

Payout cadence	Monthly, NET-15 after statement reconciliation
Exit clause	Deactivate integration anytime; no lock-in
Data	First-party completion data shared with partner dashboard; brand creative assets remain brand IP

Success metrics for pilot graduation:

- "e 500 verified completions/month through partner inventory
- < 3% fraud reversal rate
- Publisher NPS "e 7/10
- At least one repeat brand campaign on partner slots

C.4 Go-to-Market Strategy**##### Phase 1 - Lagos Anchor Publishers (Q3 2026)**

Target 3-5 digital-native outlets (online newspapers, youth media, campus publications). Offer white-glove onboarding: AdSpot team configures partner record, runs hostile audit Tier 2+3, and co-sells first brand campaign.

Phase 2 - Telco & FMCG Co-Sell (Q4 2026)

Bundle partner inventory into existing brand packages. Pitch: "Run your MTN comprehension test on Punch + Guardian + AdSpot earn network." Premium analytics tier (NGN 150k-500k/month) for cohort filters across publisher segments.

Phase 3 - West Africa Expansion (2027)

Ghana (Graphic, Joy Online) and Kenya (Nation, Standard) via same partner portal. Localise rev-share settlement currency. API access for agency holding companies (Year 2+ revenue line).

Pricing benchmarks

Metric	Range (NGN)
CPM equivalent	800 - 2,500
Cost per completed review (with questions)	15 - 45
Premium analytics (monthly)	150,000 - 500,000
Platform take rate (gross)	28% - 35%

C.5 Competitive Moat & Risks**Moat:**

1. Verified attention graph - proprietary session + question scoring per reviewer
2. Dual-sided liquidity - brands and reviewers on shared ledger
3. Partner network effects - publishers bring inventory; AdSpot brings brands and fraud ops
4. Hostile audit CI gate - automated quality enforcement before every deploy
5. Local payout rails - airtime/data redemption tuned for NGN micro-rewards

Risks:

Risk	Mitigation
------	------------

Reviewer farming / bots	Fraud module, device signals, admin review
Publisher quality variance	Slot-level performance scoring; pause underperforming inventory
Regulatory (NDPC, CBN)	Licensed payout partners; data minimisation
Brand concentration	Agency channel + self-serve SMB tier
Partner churn	No lock-in; transparent monthly statements

C.6 Financial Outlook (Summary)

Line item	Year 1	Year 2	Year 3
Platform revenue (net)	NGN 61M	NGN 322M	NGN 882M
Partner / API fees	NGN 0	NGN 8M	NGN 45M
EBITDA	NGN (19M)	NGN 42M	NGN 288M

Year 1 intentional loss funds Lagos launch and partner pilot ops. Year 2 EBITDA positive on Nigeria scale; Year 3 assumes Ghana + Kenya soft launch with network partner fees as a material revenue line.

Conclusion

AdSpot v1.1 delivers a production-ready rewarded-attention platform with a new Partner Management Portal and Integrate with AdSpot flow for media network expansion. The unified monorepo (SPA + API + partner module), PostgreSQL schema, 3-tier hostile audit, and default-inactive partner integration provide a trustworthy foundation for publisher rev-share pilots and aggressive Nigeria-first growth.

Next steps: Deploy staging per docs/AWS_RESTAGE.md, onboard first 3 publisher partners, run live Tier 3 hostile audit, and launch 90-day pilot with co-branded brand campaigns.
